Subject: Notification of the Operational Status of the M-Area Inactive Process Sewer Lines (081-M) Operable Unit Active Soil Vapor Extraction Unit

SRNS-J2000-2018-00379

Diedre, Jon, Heather,

Per regulatory agreement, the Savannah River Site is required to notify the U. S. Environmental Protection Agency and the South Carolina Department of Health and Environmental Control when the M-Area Inactive Process Sewer Lines (081-M) (MIPSL) Operable Unit (OU) active soil vapor extraction unit (SVEU) is not operational for more than seven (7) consecutive days. This email serves as notification that the MIPSL OU active SVEU has been inoperable since June 14, 2018 due to the lockout of the M-1 Air Stripper. The MIPSL OU active SVEU will remain out of service until the power source to the M-1 Air Stripper is placed back into service. Electrical power for the MIPSL OU SVEU originates from the same circuit as the M-1 Air Stripper. The M-1 Air Stripper is currently down to repair a subsurface leak that was discovered on the recovery well RWM-05 line. Recovery well RWM-05 is part of the M-1 Air Stripper system, which is one of the Resource Conservation and Recovery Act-permitted corrective actions for the M-Area and Metallurgical Laboratory Hazardous Waste Management Facilities. The Savannah River Site is currently waiting on parts to repair the RWM-05 line. A follow-up e-mail will be sent to notify you when the MIPSL OU SVEU resumes operation.

Please contact me if you have any questions, comments, or concerns.

Thanks
