RE: Facility Decommissioning Evaluation (FDE): Chemical Feed Facility, Plant/Building 607-14D, G-FDE-D-00053, Revision 0, February 23, 2021, Cover letter dated February 25, 2021

Dear Mr. Hennessey:

The South Carolina Department of Health and Environmental Control (SCDHEC) has reviewed the referenced document with respect to the Memorandum of Agreement for Achieving an Accelerated Cleanup Vision for the Savannah River Site (SRS). The Department has the following comments.

1) Process History, Pages 19 – 21

Page 20 states, "Some indication of Soda Ash spill points are evident in the interior of 607-14D.", yet "N/A" is provided as the response to "Evidence of spills?" in the Chemical Process table on page 21. Regardless of the definition of "chemical or radioactive processes" provided on page 19, the FDE should not contain this apparent discrepancy. Please correct.

2) Part 2, Evaluation, Question #1, Page 23

If the chlorine-containing compound that was utilized in the Chemical Feed Facility (see page 19) was, or is, defined as hazardous by CERCLA, then there should be an "X" in the "Yes Column", not the "No Column", for Question #1. Please re-evaluate the response with regards to this compound.

3) Part 2, Evaluation, Question #2, Page 23

Question #2 is marked “No” in response to whether or not there was a spill of stored packaged material in Building 607-14D. The justification provided states that no spill of radioactive or hazardous chemical material occurred; however, the posed question concerns any stored packaged materials. Please re-evaluate the response to Question #2, and if necessary, continue the evaluation to completion.

If you have any questions, please contact Leigh Beatty at 803-642-1637 or via e-mail at beattykl@dhec.sc.gov.

Sincerely,

Gregory N. O'Quinn
