Subject: RE: DOE-SRS TNX Response to EPA Comments

SRNS-J2600-2020-00167

Reference: Hennessey to Richards and Fulmer, (IACD-20-139, Dated March 31, 2020, ARF-022633) Savannah River Site's Responses to the Regulatory Comments on the 2018 Annual Comprehensive TNX Area Groundwater Monitoring and Remedial Action Effectiveness Interim Report (U) (SRNS-RP-2019-00391, Revision 0, June 2019) SEMS Numbers: 21, 29

Diedre,

To document our phone conversation today (5/18/20) regarding your technical questions/clarifications associated with the response to EPA comments submitted as part of the above Reference; the following two items will be address (as applicable) into the 2019 Annual report that is due in June 2020:

- The SRS comment responses to EPA comments #1, 3, and 9 are fine as-is. The comment responses will be used to document the error identified in the comment. SRNS will not revise the 2018 report.
- The SRS comment response to comment #15 was not sufficient to resolve EPA's concern. To adequately resolve EPA comment #15, Figures A-39 and A-40 will be revised in the 2019 report and subsequent reports to change results of 0 ug/L to non-detect (ND). This will properly identify these results as non-detect. A definition defining "ND = non-detect" will also be added to the legend of these two figures.

Please let me know if you have any additional questions.

Thanks,
 Branden Kramer
