Mr. Brian T. Hennessey
 SRS Remedial Project Manager
 Infrastructure and Area Completion Division
 U.S. Department of Energy
 Savannah River Operations Office
 P.O. Box A
 Aiken, South Carolina 29802

Dear Mr. Hennessey:

The U.S. Environmental Protection Agency has reviewed the Combined Groundwater Monitoring Report [GMR] [SRNS-RP-^{2017 Dec 25-30 20}2018-00356] [IACD-17-146, dated June 29, 2017]. Based on the review of the document, the L-Area Burning/Rubble Pit (OU-56) and the P-Area Burning/Rubble Pit (OU-59) have had a remedy implemented of Monitored Natural Attenuation (MNA). The GMR documents the progress of the MNA remedy in reaching the remedial goals.

Further, based on the review of the GMR for the MNA at OUs 56 and 59, it is documented that the monitoring system is installed and effective. Therefore, the Remedial Action is considered complete for the remedies at OU-56 and OU-59 of the Savannah River Site (denoted as RA Complete). It is noted that the remedial goals for OU-56 have been reached, as stated in previous EPA correspondence (Tufts to Hennessey, February 16, 2018). The MNA remedy must continue to be monitored at OU-59 until remedial goals from the Record of Decision are achieved. If it is determined in the future that MNA is not effective, the remedy may need to be re-evaluated.

Should you have any questions or require additional information, please contact Jon Richards, of my staff, at (404) 562-8648.

Sincerely,

H. Glenn Adams, Branch Chief
 Restoration & Site Evaluation Branch
 Superfund & Emergency Management Division
