Subject: Fwd: Demolition

We have both EPA and DHEC acknowledging we do not need FDEs for the observation towers. Please place the FDEs and Ends Point docs in D and D project files and utilize the ends point document as a good management practice during the D and R of said towers.

Thanks,

Tom

Brian,

Susan is on vacation through July 10th and will have limited access to her email, so I will answer your question.

Being that these towers were built to observe ongoing and/or completed remedial action activities and are not part of the remedial action process, I do not see a reason to prepare a FDE/DPFR for demolition of these towers.

Please contact me if you have any further questions or concerns.

Thanks,

Heather

Subject: FW: Demolition

Susan, SRNS is contemplating removing the five wooden observation structures around the site. I don't think this rises to "Decommissioning" under the FFA, since there was no process, operation, or material management. Do you think an FDE/DPFR is needed for the D&R of these?

They are:

- Tower 904-117G - H-Area Seepage Basin closure observation tower
- Tower 904-118G - F-Area Seepage Basin closure observation tower
- Towers 904-121G and 904-122G - Burial Ground Complex observation towers

- Tower 904-114G - Savannah River Laboratory Seepage Basins observation tower (near SREL)

Thank you.
